RE: Letter of Recommendation

To whom it may concern:

Samantha Bell is a 12th grade student who was enrolled in my Introduction to Engineering Design class, Principles of Engineering class, and Civil Engineering & Architecture class. She is currently enrolled in AP Computer Science Engineering where Samantha will complete Santana High School's four year engineering program. Samantha has exemplary attendance and is always well prepared for class. Her engineering projects are well thought out and designed and completed thoroughly. Her achievements in Engineering demonstrate that she has the ability to comprehend the higher order cognitive skills that are necessary for success in STEM related fields.

Not only does Samantha perform well in the classroom, she is also an outstanding asset to the classroom, school, and community. In my course the classroom is set up in groups. She works extremely well with her peers and has excelled in both teaching and learning from others. Samantha also displays pride in her school having participated in Gymnastics, Tennis, and Dance. She is highly involved with school, always giving her all. Whether it is with academics or school clubs, Samantha has an outstanding ability to work well with fellow students and faculty.

Santana High School's engineering pathway has helped Samantha hone her passion toward the STEM fields. Samantha's ambition and passion is to pursue a degree in engineering from a four year university. Samantha is goal oriented and will do her best to achieve this goal. Her dream to obtain an engineering degree can be ascertained with generous scholarships. Samantha Bell is a worthy candidate for such scholarships.

Sincerely,

Jason Kay
